

ZL Series Vacuum Mill

This equipment is mainly used in the pharmaceutical industry to sort out uniform and qualified granules that have agglomerated after granulation according to process requirements. It is widely used in pharmaceutical, chemical, and foodstuff industries.

ZL series Mill machine is mainly composed of frame, mill system and control system. When working, push the lifter to the working position, lock the caster, then start the mill machine and feed materials.

The chassis of this machine is equipped with movable casters, making it easy to move. The height of the mill can be raised or lowered according to the production process, meeting user's requirements of production processes and electively avoiding dust and cross contamination. It can fully comply with the "GMP" requirements.

Features

The chassis of this machine is equipped with movable casters, making it easy to move. The height of the mill can be raised or lowered according to the production process, meeting user's requirements of production processes and electively avoiding dust and cross contamination. It can fully comply with the "GMP" requirements.

Parameters

Equipment Model	ZL200	ZL450
Milling Power	1.1 kW	3 kW
Mill Capacity	20~200 kg/h	45~450 kg/h
Mill Speed	0~900 rpm	300~900 rpm
Weight	60 kg	270 kg
