

JF-2 Sealing Machine

Electromagnetic induction composite aluminum foil sealing machine is a new generation of sealing equipment, such as replacing cork, dipping wax and so on. For the pharmaceutical, food, chemical, cosmetics and other industries in the plastic bottles (materials for PE, PP, PS, PVC, PET) and glass bottles. Electromagnetic induction aluminum foil sealing can effectively prevent bottled goods overflow, damp and mildew, prolong the shelf life of the sealing materials. Printed on the aluminum foil mark, but also effectively prevent the production of counterfeit products.

Auto Induction Sealer the A is versatile self and contained compact sealer. A great addition to any line for customers packaging that want that added foil seal on their product.

Specifications:

Model	JF-2
Capacity(b/m)	50-200
Diameter of opening(mm)	20-70
Height of bottle(mm)	40-240
Power(w)	4000
Cooling mode	water-cooling
