

Semi-Automatic Capsule Filling Machine JTJ-V

Semi-Automatic Capsule Filling Machine can fill up to tens of thousands capsule per minutes. It only requires one person to operate machine which is simple to start with and has high filling efficiency. With the replacement of the mold, you can start safe production of 00,0,1,2,3,4,5 size capsules. What's more, we could provide an ultra-quiet version for our customer who has special need for sounds.

Description

The machine is equipped with electric and air control devices and an automatic counting device, which can automatically complete the whole filling process in sequence from positioning empty capsules, separating empty capsules, filling capsules to locking filled capsules.

It is suitable for filling the capsules in sizes 00#,0#,1#,2#,3#,4#. It can be customized to fill size 000# and size 5# capsules, but the filling speed will slow down.

The filling amount can be adjusted by the number of rotations of the dosing disk. The powder feeder also has an auger to regulate the powder filling.

This improvement meets cGMP requirements, and results in faster production, more accurate filling, safer operation, simpler maintenance, super lower noise, easier cleaning and less labor intensive than other machines.

Parameter

Machine Model	JTJ-V semi-automatic
Max Capacity	12500 pcs/hour
Suit for capsule size	00#, 0#, 1#, 2#, 3#, 4#, 5# and safety capsule
Type of filling materials	Powder/grain
Dimensions	1400x950x1480 mm
Net weight	300kg
Power	2.2kw
Attach equipment	Air compressor one set, Vaccum Pump one set
