

## Box Stretch Wrapping Machine

Box Stretch Wrapping Machine is used for stretch film wrapping around the box or a carton. It is available at most competitive in rates and can custom configured. These machines assist in reduction of labor by automating the process of attaching, detaching and pressing the film. For the product to be wrapped, the operator simply places the item on a turn-table and switches the machine to operate. All models of the stretch wrapping machine have been designed and developed with economy, efficiency and safety as concerns.

### Technical Specification:

Turn Table Diameter	750 mm
Maximum Load Weight	80 Kgs
Maximum Packing Size	600 x 600 x 450 mm
Machine Dimensions	1350 x 675 x 750 mm
Power	1 HP, 220V, Single Phase
Stretch Capacity	200% to 250%
Machine Body	MS Powder Coated
Speed	Variable
Machine Weight	170 kgs
Film Material (Machine Grade)	LDPE Stretch Film (Machine Grade)
Maximum Film Width	500 mm
