

HP-450-3S-2 / HP-600-3S-2 Vertical Sealed Shrink Packaging

The vertical sealing shrink packaging machine uses heat shrink film to wrap products, which shrinks tightly around the surface when heated, achieving a sealed and visually appealing packaging effect. The vertical end-seal design is ideal for taller items, such as beverages and compressed cans, making it suitable for integrated shrink packaging solutions in production lines.

Features

- Design to pack stand-up product and multi-rows pack, such as bottles, beverages, cup noodles... etc.
- User-friendly human/ machine interface control with 8.4 inch dialogue type colorful monitor.
- 50 sets of recipe (bag length, speed, feeding position, cutting position) enable product switch by one click.
- The parameter of feeding position is set up and saved via touch screen and it will be auto positioning whenever production changeover.
- Self-diagnosis function, error message will show on screen for easy troubleshooting.
- Equipped with SICK (Germany made) photocell for the eye mark tracing control.
- The bottom sealing wheel equipped with an edge trimming and film retrieval device for delicate profile.

Specification

MODEL	HP-450-3VS / HP-600-3VS
Operating Speed	20 – 100 pack/min
Bag Length	150 - 600 mm (Customized available.)
Max Film Width	450 mm / 600 mm
Max Product Width	150 mm
Max Product Height	150 mm
