

Liquid high-speed packaging machine DC-338-2

Features:

DC-338-2 is the liquid sachets forming, filling and sealing machine which adopts a 3-step roller system to achieve both 3 and 4 sides sealing.

Among such rollers, the first couples are for vertical heat sealing, second for horizontal heat seal, and third for cold seal. The vertical and horizontal sealing pattern are introduced with dotted line as well as anti-leakage design, enabling neat and tidy appearances of the come-outs.

The products go inside the sachets via magnetic pump design for any running liquids (oils and vinegars etc.). The length of the sachets can be altered flexibly without changing any accessory or mould, allowing it suited for various products in one single machine.

Three different cutting blades, straight, saw tooth and dash line, upon requests. Notch cut function supports your sachets to be applied freely.

- High Quality Stainless Steel Cover
- Sealed With Three Rollers
- Inverter Control
- Intelligent Temperature Check
- Sachets` Length Changes As Wish

SPECIFICATION:

Length	Width	Speed	Volume	Consumption power	Weight
40-120 mm	40-85 mm	30-120 pec/min	1-60 ml	3.5kw/AC380V	550KG
