

ZL Rotary Granulator

This machine is used to in such trades as pharmacy, food, medicine taken with water, chemical industry and solid beverage, to mix the supplies well and to make necessary particle. It also can crush abolished slice and dry and crowd it into a particle. It is very suitable for material of higher viscosity. The machine that contact with the material are all made of stainless steel, aesthetic in appearance, structure reasonable, granulation shaping rate high, beautiful particling, produce material automatically, preventing from artificial to appear particle that material lead to the fact damaged, suitable to the continuous productive process. It crushes and keep through machinery material leaf is it rotates in opposite directions to make. Keep material leaf become certain angle makes supplies is it crush to press downwards to make to rotate, crush big horn spiral leaf, push the hole form sifting of the supplies and become particles.

Technique Parameter:

Model	ZL-250	ZL-300
Cutting knife capacity	250(L)	300(L)
Max size for pellet	2-2.2 (mm)	1.8-2.5(mm)
Overall size(mm)	700*540*1300	880*640*1300
Motor power(kw)	3	4
Weight (kg)	350	400
Capacity (kg/h)	100-200	140-400
