

GX series Capping Machine

The GX series capping machine is different from the traditional batch type capping machine, which overcomes the shortcomings of the slow rotation speed of the batch type capping machine, the cap is not tight, the injury of the bottle cap is big and the scope of application is small. In the design, the use of straight line type into the bottle, automatic cover cap, and the new technology, such as continuous capping.

GX series capping machines to use the latest technology to can and automatically place and accurately torque most cap types onto most bottle types. The spindle cappers handle almost any bottle type or shape including pet, PP, PVC, HDPE, LDPE, and glass.

Technical parameters:

Model	GX-200	GX-200T	GX-200Z	GX-300
Generating capacity (b/m)	30-200	30-150	30-120	30-300
Suitable bottle diameter	30-120	30-80	30-80	30-120
Applicable bottle height	50-250	50-250	50-250	50-250
Top cover method	manual	promote	vibrate	manual
Motor power (kw)	1	1.2	1.5	1
Compressed air(Mpa)	0.4-0.6	0.4-0.6	0.4-0.6	0.4-0.6
