

## **Automatic Double Line Intermittent Bottle Washer Machine ALS**

Bottle Washer is equipped with two water separators, circulating water tank and water pump, one time tap water flushing and one pure water flushing.

Double Line Bottle Washer mainly used for washing Plastic Bottle, Glass Jar, Metal bottles, Sipper water bottles, Sigg bottles, can

### **Main Features:**

- 1). This machine is a caterpillar type artificial bottle washing water, tracking rushed and positioning type shower, washing time is about 8 seconds, bottle control time of about 26 seconds.
- 2). With water filtration facilities, can filter water impurities can be recycled.
- 3). The exposed parts of the part in contact with the liquid, are made of stainless steel, brass and nylon, meet the food sanitation standards.
- 4). The water diversion valve body is made of reinforced nylon and has low water absorption. The body tray is made of stainless steel, supported by spring and polished on the upper surface, so the friction coefficient is small and long service life.
- 5). The machine has the advantages of novel design, simple operation, reliable operation and strong adaptability
- 6). Recommended match to Automatic Filling Line: Automatic Filling Machine, Automatic Capping Machine, Automatic Labeling Machine

*\*Every machine we build is rigorously tested for optimal performance and incorporates changeable baskets, when you inquiry us, please kindly let us the bottle's size, when you purchase this machine, please kindly send us the bottles for customized mold size ;)*

**Technical Parameters:**

Washing heads	48 heads one bottle one mold
Dimension	2700*670*1180mm
Production capacity	2000~3000 bottles/hour
Water consumption	1.5m <sup>3</sup> /h
Power	1.25KW,220V,frequency control
Working pressure	0.2~0.4Mpa
Applicative bottle height	50-150mm
Applicative bottle diameter	25-80mm
Weight	330Kg
