

YT-2 Vacuum Liquid Filling Machine

YT double-head liquid level control liquid filling machine is a negative pressure semi-automatic filling machine, which is mainly used for filling liquid materials such as toilet water, perfume, lubricating oil, detergent and so on. There are two models of double-head and four-head. It has the metering performance of constant liquid level, the height of liquid can be adjusted, the structure of this machine is compact and reasonable, the operation is simple, and the maintenance is convenient. The parts in contact with the material are made of 304 stainless steel. It is suitable for filling glass bottles and plastic bottles that are not easily deformed after being vacuumed.

Technical data:

Model	YT-2
Bottle height	≤350mm
The maximum diameter of the bottle	≤φ35mm
The minimum diameter	≥φ4.5mm
Adjustable high level	15-50mm
Dimensions	660×470×1330mm
Room temperature	0-30°C
Pumping rate	5.5 L/S
