SLJ-B-60B Intelligent Vertical Cartoning Machine (star production)

According to the current market of small scale, diversification of production of carton packaging, artificial expensive. Our company developed a series of vertical packing machine. This semi automatic vertical packing machine mainly take the box, open the box, folding box, box sealing, out of the box and other functions. Integration of advanced design, implementation of a machine using a variety of package, do not need to change the template, simple and convenient adjustment. The PLC control system to make the machine more safe and stable operation, operation platform of man-machine interface is simple and beautiful appearance, with GMP and CE.

Main Features:

1. The vertical box, a number of patented technologies, suitable for various bottle types, PTP (blister packaging), light solid objects and so on;
2. PLC control of automatic operation, feeding, folding box, box sealing, a step out of the box;
3. Flexible operation, not to hurt the carton packaging without damage;
4. The rapid change of production, the use of a machine;
5. The structure of module, on-line operation, easy maintenance.

Technical parameters:

Size: 1600mm×1200mm×1500mm

Throughput: 30—50Box / min

Power: 1KW

Gas Consumption: 100—160L/min

Carton Specifications: Long 20—80mm Wide 20—80mm High 60—200mm (Special specifications can be customized.)
