NJP-800C automatic capsule filler processes the products for optimal productivity up to 800 capsules per minutes, featuring low-maintenance operation, minimal downtime, and overall dependable production.

Description

- NJP-800C automatic capsule filler processes the products for optimal productivity up to 400 capsules per minutes, featuring low-maintenance operation, minimal downtime, and overall dependable production.
- Powder dosing uses the 5-stage tamping technology for an enhanced accuracy. Filling of pellets is available.
- Capsules from the bunker are fed into the orienting device along the vertical guide.
- Then they are transferred into special cells on the rotor. Here the capsule is separated, after what the bottom part comes to the filling position.
- After filling the bottom part with the material, on next positions, the non-separated capsules are rejected, and the filled bottom parts are joined with top parts. Then the filled capsules are counted and taken away into the receiving box.
