

## RS-801 line automatic sealing machine

Description of the machine: this machine is developed according to market demand of the new assembly line type full automatic sealing machine, sealing pieces of membrane, membrane is placed automatically, automatic hot pressing sealing, used in instant noodles, desiccant box sealing, save human resources, can be one-time sealing two cups, four cups, improve the efficiency of production, welcome by the masses of users.

Machine function and configuration: automatic transmission, automatic filling, pressure seal. Can be connected line, unmanned, saves the manpower, improve production efficiency. Taiwan PLC program control, stable and reliable, human-machine interface touch screen. Classic digital display temperature control table, temperature difference of plus or minus 5 degrees, the sealing effect is good. There is the function of fault alarm and temperature alarm, to ensure that the sealing effect. Taiwan photoelectric tracking and electrical integration.

### Technical parameters:

Production rate	600-800 boxes per hour
Sealing diameters	50-250 - mm, square rectangle etc can be customized
Joint filling material	Plastic composite film, aluminum foil composite film, PP, PE, PET, PS is ok
Compressed air	4-8kg/cm <sup>2</sup>
Temperature Range	0-300度
Power	500-1000W
Voltage	220V/110V
Machine size	2500*1000*1500mm
The machine appearance	stainless steel
Net weight	200kg
