

BDPJ500 light checking machine

SDPJ500 equipment is used for visual inspection using a light shade of glass bottles for infusion solution after the sterilization process. The number of light stations is a dependence on the performance of the processing line. This equipment is suitable for bottles and vials of 50 ml, 100 ml, 250 ml and 500 ml. Due to the wide range of performance from 30 to 600 bottles per minute, this machine meets a variety of production requirements. Electrical power is 3.3 kW.

FE Pharmatech Company is a specialized Chinese manufacturer and supplier of the machine for visual inspection. Our company also offers a device for unloading and moving the bottles leak detectors, sterilization ovens and more.

Main technical parameter:

Suitable specification	50-500ml
Production efficiency	120-450 bottles/min
