

## *NY-F50 Automatic Machine Canned Meat Seaming Machine*

A can seamer is a machine used to seal the lid to the can body, the lid usually round and metallic. The can body can be metal, plastic or even glass. It is simple in operation and it is an ideal packing equipment of food, beverage, pharmaceutical and the other industry.

### **Features**

1. The machine is controlled by the PLC system and touch screen.
2. The production capacity and automation are very high. So the labor cost can be saved. This machine is applicable to be part of packaging system.
3. There are four wheels on the seaming head. The seaming wheel will never rust and be very hard because of the chrome steel material.
4. Irrational design is adopted for the cans during the seaming and the processing accuracy is high. The seaming quality is superior to other product.

## Technology Data

Material	Stainless steel
Seaming head	1
Sealing speed	10-50 cans/min
Sealing height	50-200mm (adjustable)
Applicable bottle diameter	35-130mm
Control module	PLC and touch screen
Air supply	0.6Mpa
Power supply	380V/50Hz
Power	1.3KW
Machine size (LxWxH)	2020mmx920mmx1730mm
Weight	200KGS
