

## *Link-LS260T Automatic Mixing Capsule /Tablet Counting Packing Machine*

This machine is designed for quantitative packaging of small items such as screws, hardware accessories, plastic accessories, etc. It is widely used in hardware lighting, furniture, screws and other industries. The overall structure of the equipment should be reasonable, firm, beautiful, reliable and durable.

A new modern automatic assembly line that reduces worker assistance time and allows managers to fully grasp production trends and progress in real time. In order to achieve the purpose of improving efficiency and clear management.

Appearance: The surface is iron plate, the part is computer white paint or electroplating, and the other parts are stainless steel; the built-in transmission mechanism parts of the equipment are all quenched from high-strength steel or the surface is blackened, with high strength and wear resistance; the equipment is equipped with casters It is easy to move, and there are also fixed foot cups, which are convenient for fixed use.

### **Features:**

1. The vibrating plate is automatically fed, which can be applied to the packaging of various materials (the relevant vibrating plate can be customized according to the material).
2. It adopts PLC programmable controller and is equipped with Chinese man-machine interface, so that the equipment is easy to operate, easy to adjust and has a high degree of automation.
3. The intelligent temperature controller is used to control the horizontal and vertical sealing in two ways, so that the sealing is firm, the sealing performance is good, the bag shape is flat and beautiful, and the packaging efficiency is high.
4. It can automatically complete: counting, cutting, sealing, cutting, bag making; automatic output calculation, settable amount, automatic shutdown after finishing the quantitative work, etc.
5. It can automatically distinguish the fault and display the fault point.

6. The length of the bag can be adjusted by itself
7. You can start a single disk or multiple disks according to your own needs

**Technical Parameters:**

<b>Model</b>	<b>LS260T</b>
Blanking way	Liquid pump
Measurement	1000-2000 ml/pack
Power	2.5 kw
The bag size	L:80-300 mm W : 50-200 mm
The bag type	Back seal pillow type bag
Production capacity	10 – 40 bales/min
The control mode	PLC + touch screen
Enclosure	Stainless steel or plastic spray
Air supply	0.6 Mpa 30L/min
Voltage	220 v, 50 hz
Gross weight	500 kg
Size	L 1320mm* W 9500mm* H 2000mm
