

## *CGY500/1000 Oil Coating Machine*

Oil coating machines are designed and manufactured by SINOFUDE, a leading manufacturer of candy-making equipment. Oil coating machines give gummy candies the shiny, non-sticky surface that people love.

### **Description**

Our oil coating machine is a newly designed and manufactured device that makes oil-coated gummies shiny, non-sticky, and easy to digest. The machine is made of stainless steel and has a spiral design that makes the gummies move back and forth in the drum while they're being coated with oil.

### **Feature and Application:**

The oil coating machine is used to coat gummy candies with oil. The machine consists of a revolving drum made of stainless steel coated with a unique spiraling design. The spiraling design allows the gummy candy to absorb the oil evenly.

The gummy candy is placed inside the drum and rotates to coat each piece. The rotation allows for even oil distribution over each piece and ensures that no gummy gets left behind during the process.

After the coating process, the gummy candies are collected into a basket and then moved to the next machine, where they are dried off before being packaged and shipped.

The oil coating machine can coat all candies, including hard candy, gumballs, jelly beans, and mints.

## Technical Parameters

Model	Capacity	Power	Dimension	Weight
CGY500	Upto 500kg/h	1.5kW	1800x650x1600mm	400kg
CGY1000	Upto 1000kg/h	3kW	1800x850x1750mm	600kg
