

Fully Automatic Capping Machine (ACM-8)

This is our newly developed capping machine, integrates bottle inlet, cap sort, cap feed, capping, bottle outlet together. Well suitable for diversified caps, also very friendly applicable for anti-theft caps. Caps are grasped and positioned well, harmless to caps during the machine running. Fast speed of machine and high qualified rate of capping, it bears step less adjusting, can reach the international advanced level of similar products.

Electric elements use international famous brand, which ensure the machine's quality and its service lifetime, reasonable structure, superior performance, low voice, friendly environmental.

The surface of this machine has been polished with good looking. It can be well matched with the production line. It is ideal equipment for large and medium factories.

Working principle:

- 1) This capping machine adopts rotary type for screwing caps. Caps are oriented and supplied to the cap grasping area, capping heads grasped caps send to capping area by compressed air for doing capping work, finally capped bottles are outlet by conveyor.
- 2) Caps tighten can be adjusted by clutch.
- 3) Bottle inlet can cap inlet are controlled synchronously
- 4) Reversed caps can be ejected. (Optional function)

Technical Parameters:

Model	ACM-8
Capacity	≤6000 PCS/ HOURS
Voltage	110/220V 50/60HZ
Power	3KW
Cap diameter	φ17-35MM
Cap height	10-30MM
Bottle height	170-260MM
Bottle diameter	φ40-100MM
Dimension	2000×1100×2200MM
