

## *NJP2000 Full-Automatic Capsule Filling Machine*

This machine is a full automatic capsule filling machine with multiple tamping stations, precise design and stable performance. It can complete the following process: feeding capsule, separating capsule, filling, rejecting defective capsule, closing capsule, discharging finished capsule automatically. It adopts a closed rotary table with twelve stations. There are 15 holes in double row crossing on the module. Function of machine reaches international advanced standard, which also meets the requirement of "GMP" and FDA standard. It's absolutely the most ideal machine for producing capsule products.

### **Features:**

1. Output: 120,000 capsules /hour
2. Change speed by transducer, PLC control
3. Easy to operate and install
4. Function for filling powder, pellet, granule and pill into capsule.
5. Automatic detection and diagnosis of lack of material, capsule and mechanical trouble, make alarm and stop automatically.
6. Displaying in-time speed and accumulative output.
7. Available for electronic signature and recording, and Industrial recording and Industrial Ethernet (for optional)

<b>Specifications</b>	
Productivity	2000 pcs/min
number of hole	15 holes
Size of Capsule	00~5#
Filling Percentage	≥99.8%
Dosing Precision	≤±3
Power supply	380V 50HZ
Power	6.8kw
Water supply	500L/H 0.1~0.2Mpa
Dust collector	230 m <sup>3</sup> /H
Compressed air	0.2 m <sup>3</sup> /min 4~6kg
Noisy	≤ 70db
Overall dimensions	1050×956×1934(+250) mm
Weight	1500kg
