

Manual Plastic Tube Filling and Sealing Machine

This machine adopts with internal heating method to seal the tube tail, more safer and stabler. Working process requires human intervention and consists of manual color-mark finding, filling, heating, sealing, manufacturing date printing, cutting and tube discharging. It often applies to the cosmetics industry, like face cleansers, hair conditioners, hair dyes, toothpastes, which is suitable for various packaging materials such as hoses, composite tubes, and various sizes of customization.

Technical Parameters:

Speed	15 tubes/min
Production capacity	300-700tube/h
Tube diameter	Φ10-50 mm
Tube length	110-250mm
Tank capacity	25 L
Filling volume	10-250 ml
Packing size	1000x1000x1400mm
