

DCF-250 Powder Vertical Back Sealing and Packaging Machine

The machine PLC full computer control system and touch panel operating system to clearly display the working status and operation instructions, high-precision servo motor (0.75kw) membrane transport system, the membrane transport is stable, with the optoelectronic automatic positioning and tracking system, the positioning is precise and high, Intelligent digital temperature control system, stable temperature control automatic fault alarm display function, such as low temperature, colorless band, colorless signal and other automatic alarm or stop function, sealing can punch round corners, and the stamping mould can be made according to the packaging film Automatically complete the blanking, film feeding, bag filling, date printing and other packaging processes.

Technical Parameters

Packing speed	10~40bags/min
Bag-making size	(L)50-180 (W)20-115mm
Filling range	10-250ml
Packing materials	OPP/CPP PET/PE
Film width	50-250mm
Film thickness	0.04-0.07mm
Air consumption	0.2m ³ /min 0.6MPa
Power supply	AC220V 50/60Hz 1.5kw
