

MK 302 Vertical form Fill and Seal Liquid Packaging Machine

The MK-302 is a vertical form, fill and seal packaging machine designed to package various free flowing liquid products. This Vertical packaging VFFS machine uses LDPE (Poly) film with gravity based filling system to produce center sealed pouches also commonly known as pillow pack or fin seal type pouches / bags.

Application:

Milk, Mineral Water, Juice, Soft Drinks in Poly bags / Pouches.

Features:

For Pouch Length Control one way bearings are used so that no variation occurs
 Linear Bearings are used in the horizontal Systems.
 Easy operation and low power consumption
 Excellent sealing quality
 No vibration while machine is in operation
 Available in double head model
