

HY-U Automatic Suppository Producing Line

The series of automatic suppository producing line are applied to produce suppository of bullet shape, torpedo shape, duckbill shape and other special shapes filling with materials of fatty glycerides, glycerogelatin and polyethylene glycol.

Structure & Function

- All packing materials including PVE, PE, Aluminum film/PE can be used in shell making.
- Medicine liquids in different viscosity can be filled perfectly.
- PLC and Human-Computer Interface control system make it easy to operate.
- Cooling uniformly and adjustable after filling.
- Eliminating system will pick out any unqualified products automatically.

Parameters

Model No.	HY-U	HY-Z
Capacity(pcs/h)	8000-12000	8000-12000
Unit Dosage(ml)	0.5-5	0.5-5
Capacity of storing vessel(L)	50	50
Power(KW)	7.5	7.5
Working Voltage(V)	380/3-phase AC	380/3-phase AC
Air pressure(MPa)	0.6	0.6
Air cost(m ³ /min.)	1.5	1.5
Water cost(Kg/h)	800 (recycle)	800 (recycle)
Size of shape(mm)(LxWxH)	3470x3480x2230	6660x2000x2230
Weight(Kg)	2000	1500
