

OC-600X Fresh Fruit And Vegetable Packing Machine

The Down-Film Flow Packing Machine is a large category of packaging equipment, and it is the right hand of many manufacturers. It can be used not only for packaging of unmarked packaging materials, but also for packaging using rolls of materials with logo patterns.

Overview

Flow packing machine features quick, easy changeover and adjustment that minimizes product and film waste and reduces maintenance costs.

The machine working starts with a cylindrical roll of film. The flow wrapping machine will transfer the film from the roll and through to the forming collar (sometimes referred to as tube or plow). At the same time, a conveyor has lined up individual products for wrapping. The film is fed through the collar and the product is surrounded with film, sealed and the film is then cut. The finished individual product is then gathered downstream to be bagged or cartoned prior to boxing and palletizing.

Application:

Automatic flow packing machine is a widely used packing machine. Suitable for all kinds of product packaging. Including medical supplies, vegetables and meat, baked bread, snacks and candy, daily necessities, hardware accessories, etc.

Technical specifications:

Type	600X
Film width	Max.600mm
Bag length	120mm~450mm
Bag width	50~200mm
Product height	10~80mm
Film roll diameter	Max.320mm
Packing rate	20~75bags/min
Machine weight	950KG
