

Automatic Capsule Weighing Machine KWS-60

Automatic capsule weighing machine KWS-60 is small equipment which can be connected with the automatic capsule filling machine to check whether the weight of the produced capsules meets the standard.

Automatic capsule weighing machine KWS-60 is small equipment which can be connected with the automatic capsule filling machine to check whether the weight of the produced capsules meets the standard. After time is set, the equipment adopts the working mode of segmented sampling inspection. The internal system carries out numerical calculation, and judges whether the corresponding batch of capsules are qualified products by the output mode of graphics and reports.

This machine adopts American Mettler weighing system whose precision is as high as 0.1mg. Besides, with our company's self-developed mechanical arm feeding system, the machine can achieve high precision, high stability and high efficiency.

Specifications

Range	3000 mg, for capsule 00#~5#
Division value	0.1 mg
Accuracy	±1 mg
Speed	Settable
Material of contact part	304 stainless steel
Power supply	220V, 50/60Hz
Compressed air	0.3MPa ~ 0.6MPa
Dimension	1527*503*763 mm
