

KD-600S Full Servo Pillow Type Packing Machine

Full servo pillow type packing machine use a conveyor fed automatic operation. Soft feed conveyors carry products into the system and places them inside the folded shrink film. An adjustable sealing arm raises and lowers as products move through the system. Once sealed, the closed pouch is then moved into a shrink tunnel, shrinking and tightening the film.

The Sealing Shrink Wrappers are the optimal shrink film applicator for smaller product sizes. A heated arm is raised and lowered as products pass underneath. Shrink film is then heated and sealed around the product. This ensures the proper amount of shrink film is applied to each product.

Specification

Model	KD-600S
Packing speed	50-120 bags/min
Suitable film thickness	0.03-0.06mm
Packing width	25-280mm
Packing length	65-350mm
packing height	20-100mm
Film material	PP POF PVC
Total power	7.8Kw
Power supply	220V/50 HZ
