

ZL Revolving Granulator

The machine is used for pharmaceutical industry, foodstuff industry, drinking reagent industry, chemical industry; solid industry. It can make the mixed raw material become the needed granule. Particularly it is suitable for raw materials with high viscosity.

The place where should be contacted with raw material and outer sealing place are made of stainless fully. Its appearance is beautiful and taste and its structure are reasonable. The finished product can be discharged automatically. Therefore it can avoid the broken condition of granule caused by manual discharge. It can also suitable for flow production process.

Technical Data:

Size of grinding blade(mm)	250	300
Diameter of granule(mm)	Φ2-2.2 (According to needs of customers)	Φ1.2-3 (According to needs fo customers)
Production capacity(kg/h)	100-200	140-400
Overall dimensions (mm)	700x540x1300	880x640x1300
Power of motor(kw)	3	4
Weight(kg)	350	400
