

NJP1200 Full-Automatic Capsule Filling Machine

This machine is a intermittent full automatic capsule filling machine with multiple tamping stations, precise design and stable performance. It can completes the following process: feeding capsule, separating capsule, filling, rejecting defective capsule, closing capsule, discharging finished capsule automatically. It adopt closed rotary table with twelve stations. There are 9 holes in four rows crossing on the module. Function of machine reach international advanced standard, which also meet the requirement of GMP and FDA standard. It's absolutely the most ideal machine for producing capsule products.

Features:

- 1) Output : 72000 capsules /hour
- 2) Change speed by transducer, PLC control (C type)
- 3) Easy to operate and install
- 4) Function for filling powder, pellet, granule and pill into capsule.
- 5) Automatic detections and diagnosis of lack of material, capsule and mechanical trouble, make alarm and stop automatically.
- 6) Displaying in-time speed and accumulative output.
- 7) Available for electronic signature and recording, and Industrial recording and Industrial Ethernet (for optional).

Power supply	220V/50HZ
Power	180W
Productivity	6000 pcs/min
Vacuum dust clearing	2.7m ³ /min -0.014MPa
Compressed air (Prepare by yourself)	0.25 m ³ /min 0.3MPa
Overall dimensions	1000×600×950 mm
Weight	43kg
