

Automatic Plugging and Capping Machine

This Rotary spray bottle freshener liquid filling machine with plugging capping machine production line is auto negative pressure vacuum filling, auto bottle detecting(no bottle no filling), filling for three times. Auto dropping of crimp pump cap, circulation of spray bottles' die set, It is wide adaptability which can meet to requirements of different dimension and filling volume of containers. This filling machine can be divided into automatic bottles feeding (Also can use choose manual load bottle) automatic filling, automatic pump cap capping head, pre-capping head for regulate and tighten up pump cap head and automatic capping etc.

Technical Parameters:

Dimensions (Length*Width*Height)	1500mm X 1800mm X 2100mm
Applicable Packaging Materials	Customized According To Customer Bottle Samples
Power Supply	AC 220V; 50 Hz
Overall Power	2Kw
Gas Source Required	0.6mpa Clean And Stable Gas Source
Production Capacity	No More Than 1500 Bottles/Hour
