

Bread Roll Packaging and Bagging Machine FLM 2000

- FLM 2000 Horizontal Packaging Machine is used for the packaging of bread roll, sandwich, hamburger, bread and other similar bakery products.
- The feeding unit can be designed as pan or rotating tray.
- It is possible to make the packaging of bigger bakery products such as breads up to 300 grams only through the transporter without using the feeding unit.
- With the help of the counter and the bagging system located on the right and left of the output band unit, it is possible to fill the packaged products into the bags at the desired amounts. For example if you want to make the bagging as 100 packs, first you need to enter this number on the touch screen operator panel and then first 100 bags are to be given to the right side and the following 100 packs are to be given to the left side. During this time, one worker should take the filled bag and replace it with the empty one. The main advantage of this digital counter system is the save of time and labor force mainly for the enterprises working with high capacities.
- If there is no product, the counter does not count the empty package. Only the filled packages are counted by the digital counter.

Reliable, durable, tight, attractive, excellent packaging: It ensures to make the packaging of different kinds of solid products horizontally and receive excellent and tight packages in the food, chemical, health, furniture, car and other similar industries with the flexibility and sensitiveness that the machine provides even in very high-speed operations.

Capacity: 200 packages/min.

Capacity changes depending on the type of the packaging material, the sealing style whether it is hot sealing or cold sealing and the dimensions of the product and the package. It is possible to design a packaging machine with higher capacities according to your production volume.

It is possible to develop automated product feeding systems in packaging processes by synchronizing your production line with the packaging machine.

Package Dimensions: The dimensions given below are the standard packaging dimensions of this machine. For the different dimensions within this interval, the necessary adjustments for packaging might be done on the packaging machine. For the dimensions except this interval, special custom-made packaging machinery is possible to design and produce.

Packaging Material: The machine works with printed and unprinted packaging materials used in hot or cold sealing such as OPP, BOPP, CPP, polypropylene, aluminum foil, aluminium and paper laminations, etc.

Packaging Material: The machine works with printed and unprinted packaging materials used in hot or cold sealing such as OPP, BOPP, CPP, polypropylene, aluminum foil, aluminium and paper laminations, etc.

<u>Standard Machine - Packaged Product Dimensions</u>		
	min.	max.
Height	2 mm.	90 mm.
Width	10 mm.	150 mm.
Length	25 mm.	350 mm.

For the products with the dimensions except this interval, special custom-made machinery is designed and produced upon the customer's request.
