

## **BLISTRIP-Ixt**

BLISTRIP-I xt is a single track automatic blister packing machine for packing of tablets, capsules, dragees etc., in blister packs using PVC-Alu packaging materials. The Blister Forming, Product Feeding and Sealing operations are continuous by rotary motion while the indexing and punching operations are of intermittent reciprocating motion. The output capacity of the machine depends on the product characteristics. In case of slightly curved or flat tablets up to 10mm dia an output of 150 packs per minute can be optimally achieved.

### **Features**

- Special tool design reduces trim waste
- All change over parts and adjustments accessible from front side
- Very compact in size
- Easy and quick change over reduces material wastage and down time
- Simpler operation reduces operator fatigue – increases output

### **Specifications**

<b>Max. Web Width</b>	148 mm
<b>Max. Forming depth</b>	10 mm (Expandable up to 20)
<b>Max. output</b>	150 (1 UP), 300 (2 UP)
<b>Max. Strokes/Min</b>	150
