

SED-GRJ Health Products Softgel Encapsulation Machine With Touch Screen Control

High-speed soft capsule machine is a kind of soft capsule production equipment, with large output and stable performance. It is widely used in the production of drugs and health products.

The equipment adopts the patented technology die spindle seat structure, and the average trouble-free time is greatly prolonged.

Advantages of Softgel Encapsulation Machine

1. The patented die base structure of the machine head has higher accuracy and longer average trouble-free time.
2. The micro rubber lubrication system with high precision, digitalization and on-line control can memorize the optimum lubricating oil quantity of Roucun, and adjust it more conveniently and accurately. The capsule is free of cleaning, shortens drying time and improves production efficiency.
3. Using independent water cooler to control the temperature of rubber pulley is more stable and convenient to operate.
4. Gelatin liquid level is controlled by capacitive proximity switch, non-contact, stable and reliable.
5. Light conveyor, small size, light weight, easy to disassemble and assemble, easy to clean;
6. Operating interface design is more humanized, simple and intuitive, easy to learn and understand;
7. Patented nozzle lifting mechanism, mechanical limit structure to prevent accidents;
8. The patented symmetrical loading structure of the feed pump ensures the stability of the loading and the adaptability of the material.
9. Patented die cold air technology can improve production efficiency and product rate (selection) when pressing special materials.

Product Parameters

MODEL	SED-GRJ
Number of plungers	32 pcs
Filling accuracy	<±1.5%
Capacity	130000pcs/h
Total power	13kw
Dimension	2250*1200*1950mm
Net weight	500kg
