

SED-150CH-H S-Style Single Paddle Dry Powder Mixer Machine With Stainless

The whole machine is made of stainless stain, its horizontal type mixer. It's widely used for mixing of powdery or paste material in pharmaceutical, chemical, foodstuff.

The Machine through mechanical rotation to drive S type agitator, promote the materials reciprocating flipping, uniform mixing. When operating using electric control, can set up time of mixing, then automatically stop, so as to improve the mixing quality of each batch.

Application

1. Good dispersion: The equipment completely solves the problems of low uniformity and dead angle caused by different specific gravity of materials. This equipment adopts the mixing structure of five-axis with flying knife mortar, which can effectively disperse various short fibers.
2. Wide range of use: The equipment can meet the production of dry mortar with different performance requirements. Such as: masonry mortar, plastering mortar, polymer mortar required for thermal insulation system, polystyrene particle moisturizing mortar and other dry powder mortar.
3. Simple and convenient to use: the equipment has a small footprint, simple operation, low energy consumption, and can produce 5-8 tons per hour.
4. Long service life: The vulnerable parts of the equipment are all made of high-strength wear-resistant steel. It has the characteristics of long service life.

Parameter

Volume (L)	100
Power of agitation motor (kw)	2.2
Rotation speed of agitation (r/min)	24
Power of Inclined motor (kw)	0.55
Input(kgs)	50
Weight (kg)	300
Overall dimensions (mm)	1400×500×1000
