

JC-400C More Boxes Piled Up Cellophane Wrapping Machine

This Cellophane Wrapping Machine is suitable for cellophane and BOPP film coating, for different specifications of cardboard packaging boxes, packaging products for three-dimensional packaging equipment.

Transparent paper (membrane) and a folding and sealing line printed with graphic or holographic laser mark, which can be pasted by adhesive to facilitate the folding and sealing of finished products and the function of anti-counterfeiting.

The machine's work is to rely on the machine internal series of CAM drive various connecting rods and components to complete, this machine USES multi-function digital display frequency conversion stepless speed regulation, PLC programming control technology, automatic box, automatic counting, touch display to achieve man-machine interface; Pneumatic falling film is adopted. Simultaneously multi – box assembly packing.

Characteristics:

- Multi-functional digital frequency conversion no-polar adjusting speed.
- Falling film controlled by pneumatic actuated
- Tearing tape device
- Touch screen and PLC program controller

Technical Parameters:

Model	BT-400C-I
Package size	(100-300)x(50-200)x(15-80)mm
Capacity	12-20 packs/min
Voltage	220V, 50hz one phases
Motor power	0.75kw
Electric heating power	4kw
Overall dimension	2250mm×1100mm×200mm
conveyor size:	1800mmx500mmx150mm
N.weight	1200kg
Application	Single box or multi box
