

## Automatic Capsule Filling Machine NJP-200/400/800/1200/2000/3200/3800

This model is an intermittent motion and hole plate type filling full automatic capsule filling equipment. It adopts an optimization design for meeting the characteristics of Chinese medicine and the requirement of GMP, it has the characteristics of compact mechanism, small volume, lower noise, precision filling dosage, multi-function, stably running, etc. It can finish the following motion at the same time: capsule feeding, capsule separating, power filling, capsule rejecting, capsule locking, finished capsule discharge and die hole cleaning etc. It is the most ideal hard capsule filling equipment for the pharmaceutical and health food industry.

### Technical Parameters:

| Model                             | NJP-200/400/800/1200/2000/3200/3800 |
|-----------------------------------|-------------------------------------|
| Speed                             | 200-3800pcs/minute                  |
| Capsule Size                      | 00#, 0#, 1#, 2#, 3#, 4#             |
| No. of Nozzles/holes of each mold | 2-27 pcs/Mold                       |
| Filling error                     | ±3%-±4%                             |
| Filling Material                  | Powder                              |
| Noise                             | ≤75dB (A)                           |
| Power                             | 3.75-9.85KW 220/380V                |
| Weight                            | 600-2600kgs                         |
