

MY-2XS Vertical Perfume Filling Machine

Perfume filling machine is used for filling floral water, perfume and other water-based materials. The machine adopts negative pressure and liquid surface type filling. It includes two kinds of specification such as four-head and six-head. Explosion-proof type products can be provided according to user requirements.

Features of 2 heads perfume filling machine:

1. Negative pressure liquid sucking filling. The filling volume is measured according to liquid level.
2. Caster wheels are installed for convenient movement.
3. The parts and table surface that contact the materials are all made of 304 stainless steel.
4. Suitable for glass bottles, or plastic bottles whose body will not be easily deformed after vacuum extracting.
5. Convenient adjustment, operation and maintenance

Technical Parameters:

Model	MY-XS2
Bottle Height	<350mm
Diameter	4.5-35mm
Viscosity Range	20CPS
Pumping Rate	5.5L/minutes
