

## *CONTI-A Continuous Packaging Machine With Auger Filling System*

- Advanced Auger filling system designed for high speeds operated by servo motor.
- Speed: 100 bags per minute.
- Horizontal sealer jaws is driven by advanced servo motors to maintain high quality in the formation of pouches.
- Vertical sealing system works by Continuous sealing wire which is driven by servo motor.
- The roller pull system is operated by pulleys and rubber belts, which are driven by servo motor.
- Roller pull system is equipped with a vacuum device to ensure better pulling without friction.
- The machine is made entirely of Stainless Steel 304.
- Able to work with all types of integrated rolls.
