

Anti-Corrosive Filling Machine YQFS-5000

Description:

This machine is high-tech filling machine with anti-corrosion. The contacted part of liquid Adopt non-metal material and is an ideal equipment. It is suitable for the filling of various corrosive liquids, like washing liquids, toilet cleaner, detergent, pesticides, vitriol, reagent, etc., widely used in chemicals, & pharmaceuticals fields

Main performance and structure features:

- Control system - with Mitsubishi PLC control system, filling dose of random tuning
- Operation interface - colorful screen interface, human-machine interface is simple, safe and reliable
- Feature Enhancements - Cutting with anti-drip device, it can dive to fill with materials. (This feature can be optional)
- Electrical components - using internationally renowned brands to ensure the equipment is reliable and of high accuracy.
- Mechanical components - the main parts is made of high quality PP frame, contact part is made of nontoxic corrosion silica gel, PTFE hoses, valve is PVC.
- Extensions - can be customized for specific configuration requirements, such as: material sealed, heating, sterilization, etc..
- Count testing - real-time count, reflecting on the work output directly.
- Filling Detection - No bottle, or when bottle filling number is not enough, no filling

Technical Parameters:

Applicable specifications	100-5000ml
Production capacity	1000-2500 bottles /hour(4/8/12/16 filling heads)
Filling accuracy	±1%
Capping rate	≥99%
Power supply	380V / 50Hz
Power	2.5kW
Total dimension	2500 * 900 * 2500MM
