

BZ010 Automatic Blister Packaging Machine

Blister packaging machines are widely used in many industries to package products through steps such as forming, filling, sealing and cutting. It has the characteristics of good protection, strong display and easy opening, which can effectively improve the safety and attractiveness of products. With the development of technology, the degree of automation is constantly improving, and it will develop in a more efficient and environmentally friendly direction in the future.

Machine Detailed Parameters

In order to respond faster and recommend the most suitable machine for you

Please leave your detailed requirements:

1. Product name
2. Packing weight
3. Bag size
4. Bag type (three-side seal, middle-side seal, four-side seal or small bag, etc.)
5. Speed requirement
6. Transportation method (sea, air or express)

Technical Parameters

Punch frequency	10-40 times/minute
Production capacity	2400 blisters/hour
Power supply	380/220V 50HZ 8.5KW
Air pressure	0.6-0.8Mpa
Mould cooling	Tap water or recycle water
Machine dimension	4000x760x1620 mm
Machine weight	450Kg
