

## *GPG-50 Semi Automatic Corner and Side Sealing Machine*

The semi automatic corner sealing machine GPG-50 which is suitable for all types of cartons, after being sealed in the first half (upper cover), the carton is pushed by the L-shaped corner to seal the four corners. It need to manually adjust the size of the carton when the carton size changes. The carton is driven by the upper and lower belts. It is fast and stable when sealing, and has no folds at the four corners. It is suitable for those customers who have high requirements on the outer packaging of products, or those who require strict protection for internal products.

### **FEATURES**

- The sealing machine is designed to be simple in operation, economical and durable, safe, and low in failure rate.
- The four corners and sides of the carton are automatically sealed and smoothed at the same time. It is simple, convenient and fast. The sealing effect is also smooth, standardized and beautiful
- Using this sealing machine instead of labor can not only improve production efficiency (increased by 30%), but also reduce costs and reduce 2 to 3 packers. This has standardized packaging and saved consumables (saving 5-10% of consumables).
- This machine adopts PLC control, the operation is more simple, the performance is more stable, and the applicability is strong. It can be combined with GPA, GPB and GPC models to complete the "H" type sealing.

## SPECIFICATIONS

MODEL	PGP-50
Packing speed	480-600 pcs/h
Carton Size	L320-600mm×W200-500mm×H180-500mm
Power Supply	110/220V 50/60Hz 1Phase
Power	1050W
Adhesive Tape Width	48/60/75mm
Air Consumption	200NL/min
Air Compressing	0.6Mpa
Table Height	600+50mm
Machine Dimension	L1900×W1230×H1530mm
Machine Weight	400KG
