

B350 Automatic Film Strapping Machine

Features:

- This machine adopts the most advanced structural design and electronic control system. The main drive is the same service motor. The drive area is isolated from the product operation area, which meets the highest requirements of GMP.
- Advanced heat sealing mechanism, perfect non-overlap PE film hot melt sealing, double roll structure, maximum saving of packaging materials, and reduced packaging costs.
- This machine is equipped with a multi-column pre-stacking mechanism, which greatly improves the speed of medicine box arrangement and can meet the front-end feeding speed of 300-400 boxes/minute. The strapping speed is not less than 40 bundles/minute.
- The strapping force can be adjusted, and product replacement or adjustment is simple, convenient and fast. All adjustment and mold replacement work can be completed within 10 minutes.

Parameters

Applicable specifications	The product is suitable for 1*5 or 2*5 or 1*10 strapping modes.
Packaging materials	PE film
Packaging material thickness	6-8 threads
Production speed	Maximum speed 30~35 medium packages/minute(1*10 strapping mode)
Power supply	AC220V~(50/60Hz)
Power	2.0kW
Air pressure	0.5MPa-0.8MPa
Air consumption	150L/min clean air
Equipment weight	About 900Kg
