

FR-900 Semi Automatic Bag Heat Sealing Machine

The Automatic Bag Heat Continuous Sealing Machine is designed to provide fast and reliable sealing for a wide range of pre-formed bags and pouches. Suitable for plastic bags, laminated film bags, aluminum foil pouches, and similar packaging materials, it is widely used in food, medicine, cosmetics, and small commodity industries.

With its continuous horizontal sealing system, the machine efficiently seals bags while automatically conveying them along the belt, greatly improving production speed and consistency. The adjustable sealing speed and temperature control allow it to handle different materials and thicknesses with precise, secure seals every time.

Constructed with a durable stainless steel exterior, the machine is corrosion-resistant, hygienic, and easy to clean—meeting the demands of food-grade packaging environments. Its compact, space-saving design makes it an ideal addition to small and medium production lines without taking up excessive floor space.

The automatic continuous sealing machine offers an affordable, efficient, and user-friendly solution to enhance packaging quality and productivity.

Technical Parameters

Model	FR-900
Power	680W
Speed	0-12m/min
Sealing width	6-12mm
Temp range	0-300°C
Machine size	840*380*270mm
Machine weight	21kg
