

A&V GS

Syringes and Cartridges Inspection Machine

The A&V GS Series of fully automated inspection machines especially process syringes and cartridges filled with injectable products.

They can also integrate a number of additional inspection stations for additional controls relevant to the appearance of the barrel (cosmetic checks) like:

- Integrity of the finger grip (flange)
- Correct position of the plunger
- Cracks in the barrel
- Liquid presence within the ribs of the plunger
- Presence, position and integrity of the needle shield

The A&V GS Series machines can work in line with upstream and downstream units or complemented with denesting and renesting devices.
