

DPP200 Unscrambler

The "bottle" is an indispensable component of modern packaging machinery. Its function is to Bottle machine out of order piled on the material box (or bag) plastic bottle sorting, the container order direction arranged on the conveyor, sent to other equipment, to complete the next process (such as red bottle filling, etc.). The company production of bottle system is compact and flexible automation system a. It can adapt to the filling of containers of different sizes, the product can be random, filling containers messy orderly transportation.

Technical Parameters:

Suitable bottle	PET, PVC
Yield	12000P/h (500ml bottle)
Bottle diameter	D=Φ30-Φ90
Bottle rate	100%
Air pressure	4Kg/cm ²
Gas consumption	0.4m ³ /min
The size of the equipment	Length X width X height (3220X2130X1900)
Weight of equipment	About 1000Kg
