

## Automatic Bag Water Filling Machine JND-B 400

The automatic baggy water filling machine is used to fill bags with pure or mineral water, it provides cost-efficient and environmentally alternative to bottles and is easy to use. This automatic baggy water filling machine doesn't need compressor and all its parts in touch with liquid flowing are made of stainless steel to meet requirements of hygiene and safety regulations.

### Features:

1. PLC control
2. The baggy water filling machine has high accuracy filling system.
3. Flexible bag former
4. Fully automated
5. Low power consumption and reduction
6. Production speed of the filling machine is up to 300-600 bags per hour
7. Easy to replace the film
8. Centralized control panel for convenient operation

### Technical Parameters:

Model	JND-B 400
Packing Method	Auto Forming Heat Sealing
Packaging Material	PET/PE
Content	5-10L
Output	300-600 bags per hour
Film Width	750 mm
Bag Width	360 mm
Power	AC220V/380v±5% 50Hz
Net Weight	1200kg
Machine Dimension	1090x1500x2200 LxWxH (mm)
