

BD-168 Tea Bag Packing Machine with Double Dag

Tea is a kind of dry product, which can easily absorb moisture and cause qualitative changes. It has strong absorption of moisture and peculiar smell, and its aroma is very volatile. When tea leaves are stored improperly, under the action of factors such as moisture, temperature and humidity, light, oxygen, etc., adverse biochemical reactions and microbial activities will be caused, which will lead to changes in the quality of tea. Therefore, when storing, what container and method should be used, All have certain requirements. Therefore, the inner and outer bags are the best preserved and most used packaging.

Our packaging machine is the best machine for packaging tea.

Machinery Advantage:

- Volumetric Feeding And Weighing System, High Working Efficiency and Easy Operation.
- Plc And Touch Screen, Stable Packaging Performance.
- Customized Bag Size Based On Customer'S Requirements.. Pid Temperature Control.
- Long Life Service, Easy Operation And Maintenance.

Technical Parameters:

Model	BD-168
Working speed	30-60bags/min
Fling system	VOLUME TRIC
Bag type	Three sides sealing
Acceptable bag size	Inner.50-70mm*40-80mm(LxW) Out :85-120mm*70-95mm(LxW)
Sealing method	Heat sealing
Weighing range	0-15ml/bag
Power	220v single phase 50/60Hz
Weight	450kg
Dimensions	1270x860x1840mm
