

## Oil Filling Machine HY-4A/6A/8A/10A/12A

Automatic Oil filling machine is the newest small-scale packing equipment which our company develop out. It can be used for filling and capping various liquid and emplastc liquid, and it has advanced quantitative filling technical, composed with electricity intelligetize controller and program controller into one body, so that it is a new product with motor, electric in one. High precision flowmeter and micro electricity numerical control meter fall together as the measurement system and results in a very high precision in filling. Also it can be adopted step-less governing in filling volume, very intuitionistic and easy operation. The distance and high of each filler head can be adjusted of scope to fit for different size of container. Highly automatic conveyer belt automatic controlled by the program controller working in linear in different produce speed. Main body are made of quality stainless steel, so that it is sanitation and durable steady-going for long-time working.

Infrared auto-induction capping machine increase speed of packing. With realiable performance, high in quality ang reasonable in price, it becomes the most ideal filling equipment in lipin, petroleum, chemical etc.

### Features:

- With touch screen or digital screen, adjust filling quantity directly
- With PLC program controller, frequency conversion adjust linear filling speed
- With High precision flowmeter, credible and precision in quantitative filling
- With mechanise sealing, vacuum suck to prevent dripping
- Highly active filling in double velocity of flow from speediness to slow

### Specification:

Model	HY-4A	HY-6A	HY-8A	HY-10A	HY-12A
Suitable bottle	250ml/3000ml/20000ml				
Power	AC/220V AC/380V				
Dimension	1500*950*1800	1900*950*1800	2300*950*1800	2700*950*1800	3200*950*1800
Weight	700	750	800	900	1000
Capacity	480~960	720~1440	960~1920	1200~2400	1440~2880
