

Vertical Filling - CVP15

CVP is a vertical packaging machine high-capacity next-generation 15 d. "Continuous Jaws" with the system running this servomotor-driven machine speed can reach 100 package minutes. Screw machine particularly adapted upon need dosing system is designed for the packaging of a self-flowing powder product not.

According to dust dosing system adopted on the (non free flow powder products), pellets (free flow products) and can be filled with liquid product machine is controlled by a PLC unit.

The machine "Continuous Jaws" to ensure perfect synchronization with the necessity of the system has been used 4 servomotor. Collar and the machine can produce bags up to a width of 250 mm with pipe replacement and possible to produce gusseted pillow pack.

Technical Details:

| | |
|-------------------------------|-------------------------------------|
| Capacity | 40-55 packages / min max |
| Max Geniliş End Package | 250 mm |
| Min End Package Genilig | 75 mm |
| Board of Electrical Power | 5 kW |
| Average Electric Power | 3 kW |
| Compressed Air Consumption | 6-8 bar 700 NI / min |
| Foil Material: | OPP |
| Package types can be produced | sitting packs, gusseted bags, |
| | pillow type package, quadro package |
