

JTB (JTB-B) Paste Labeling Machine

Purpose and brief

This machine is applied in the paste labeling of various cylinder bottles. The to-be-labeled bottles are transferred by transferring belt (or screw). The label is sent by the label box to glue into the paste disk. The label in the paste disk is turned to the print area to automatically print the series number. The label belt is sent by the paste disk and the label sticks to the label belt. When it is turned to contact the bottle, it will automatically stick to the bottle.

Main technique parameters

Applied bottle: 10~500ml

Pasting rate: $\geq 98\%$

Pasting solution: resin adhesive

Power supply: 380V, 50Hz Three-phase four-wire

Power: 2Kw
