

## *DTG-250A Tube Filling and Sealing Machine*

DTG250 series tube filling and sealing machine is used for both plastic tubes or laminated tubes. The technology used is cam system and copper heating to finish the tube feeding, eye-mark, automatic filling, tube heating, code printing, tail trimming and automatic ejection. It is widely used pharmacy, cosmetics, and chemical, adhesive and food industries.

### **Features:**

- Filling and sealing are realized on one machine.
- Pistol pump filling system, used for materials of different viscosities, and filling precision is high.
- The control system is PLC and touch screen which guarantees a stable production.
- The material contact part is SS316, meeting the GMP standard.

**Technical Parameters:**

Power	220V/50hz
Tube dia	13mm-50mm
Tube length	50mm-250mm
Tube range	5g-250g
Filling speed	20pcs-30pcs/min
Filling precision	±1%
Hopper size	30L-50L
Contact part	optional
Maxing and heating	optional
Nitrogen system	optional
